

Southway Junior School Progression in Calculation

Progression from Year 3 to Year 6

The following Progression in Calculation policy has been written to meet the requirements of the National Curriculum 2014 for the teaching and learning of Mathematics.

The Progression in Calculation policy is designed to give consistent progression of learning in calculation from year 3 through to year 6.

This policy is organised according to age appropriate expectations as set out in the National Curriculum 2014.

The methods shown are only written ways of calculating. Children will also be calculating using mental strategies too.

During their time at Southway, children learn how to use models and images, such as empty number lines, to support their mental and informal written methods of calculation. As children's mental methods are strengthened and refined, so too are their informal written methods. These methods become more efficient and succinct and lead to efficient written methods that can be used more generally. By the end of Year 6 children are equipped with mental and written methods that they understand and can use correctly.

When faced with a calculation, children are able to decide which method is most appropriate and have strategies to check its accuracy. They will do this by asking themselves:

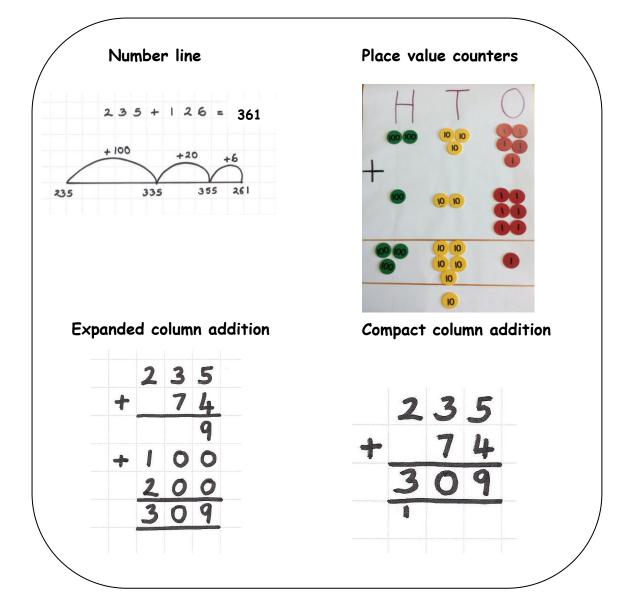

- Can I do this in my head?
- Can I do this in my head using drawing or jottings?
- Do I need to use a pencil and paper procedure?

The overall aim is that when children leave Southway in Year 6 they:

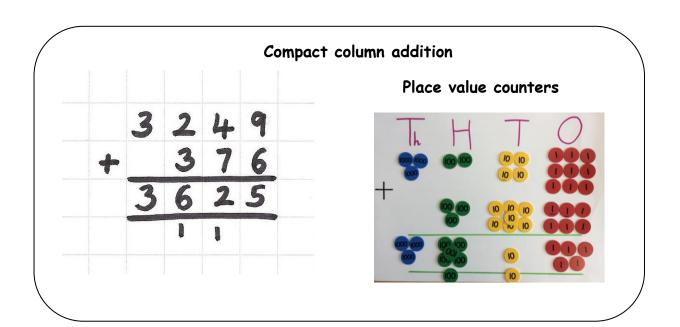

- have a secure knowledge of number facts and a good understanding of the four operations.
- are able to use this knowledge and understanding to carry out calculations mentally and to apply general strategies when using one-digit and two-digit numbers and particular strategies to special cases involving bigger numbers.
- make use of diagrams and informal notes to help record steps and part answers when using mental methods that generate more information than can be kept in their heads;
- have an efficient and reliable written method of calculation for each operation that children can apply with confidence when undertaking calculations that they cannot carry out mentally.
- have rapid recall of **all** the times tables and related division facts.
 - the National Curriculum expectation is that by the end of Year 4, children are able to recall all 12 tables up to 12x12.

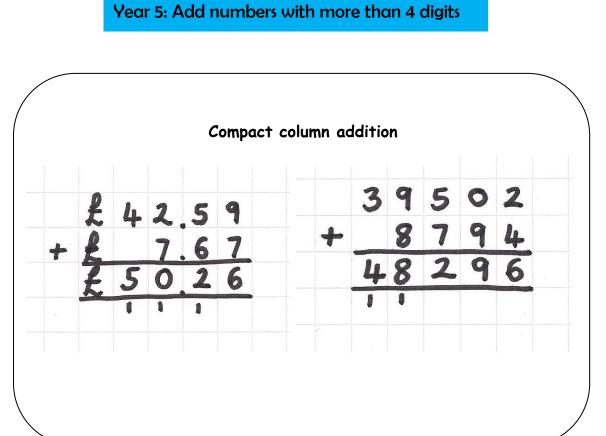

Year 3: Add numbers with up to 3 digits

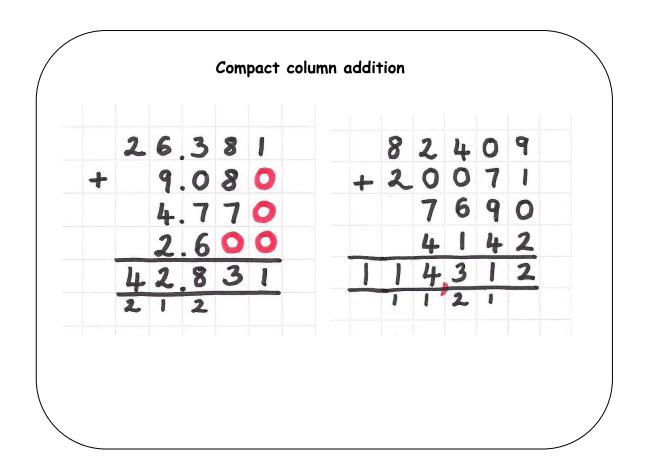

Year 4: Add numbers with up to 4 digits

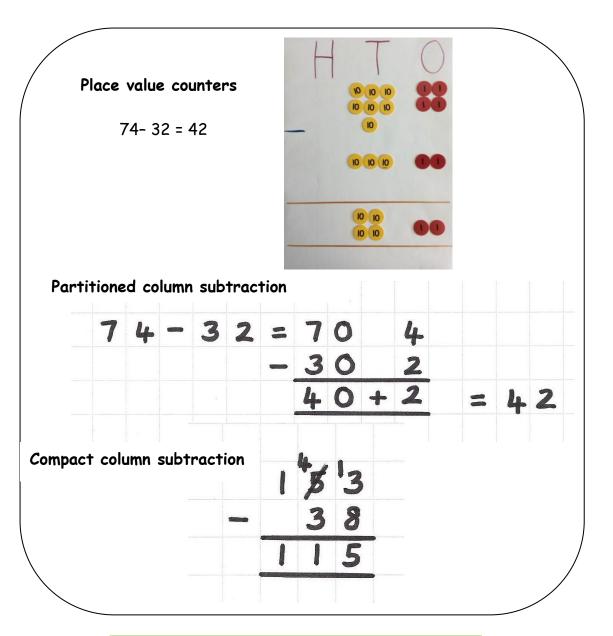

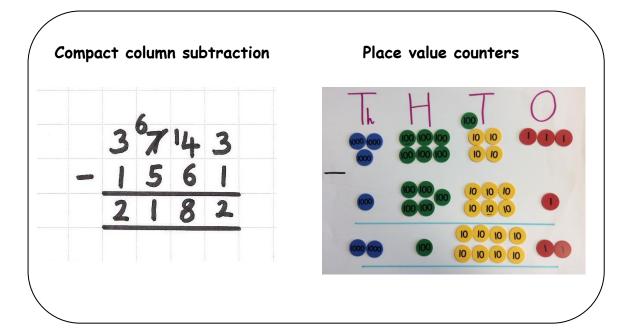

Year 6: Add several numbers of increasing complexity

SUBTRACTION

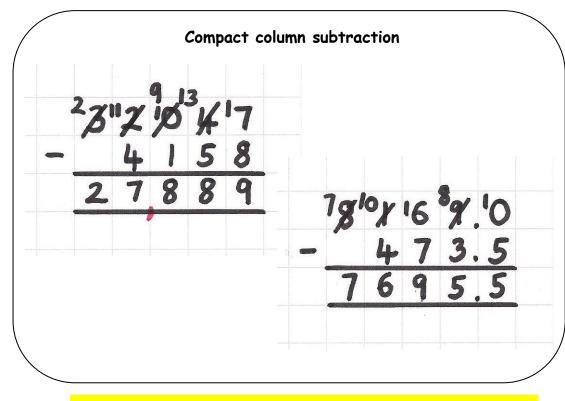

Year 4: Subtract with up to 4-digit numbers

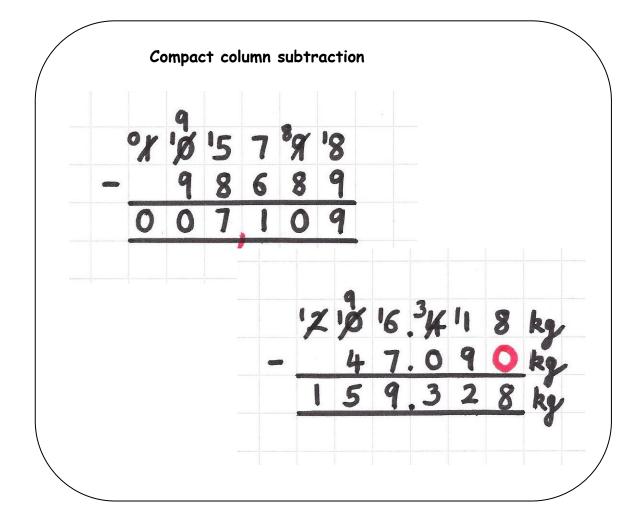

Year 5: Subtract with at least 4-digit numbers

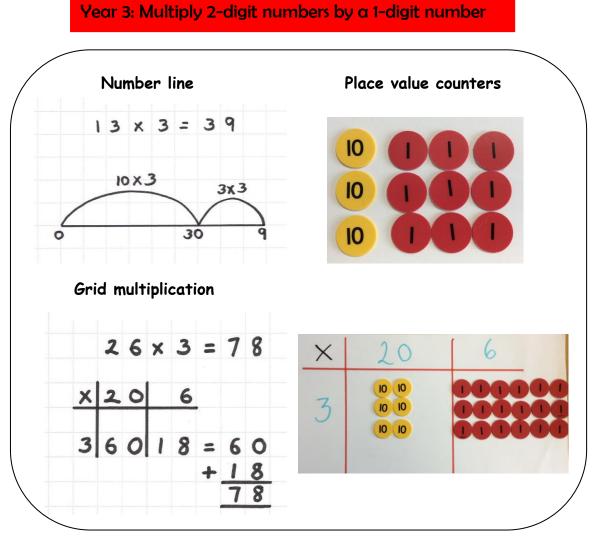

SUBTRACTION

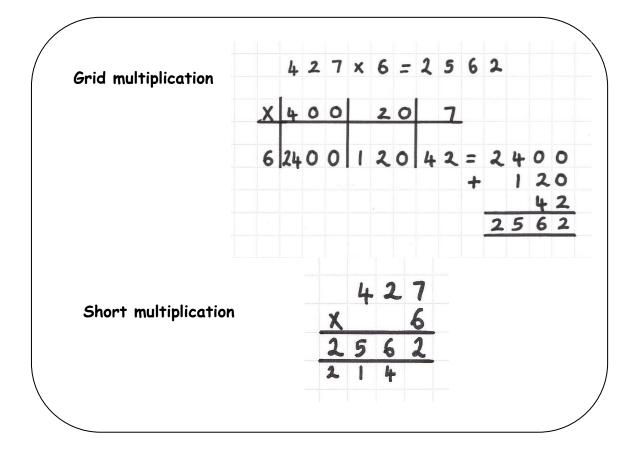

Year 6: Subtract with increasing large and more complex numbers and decimal values

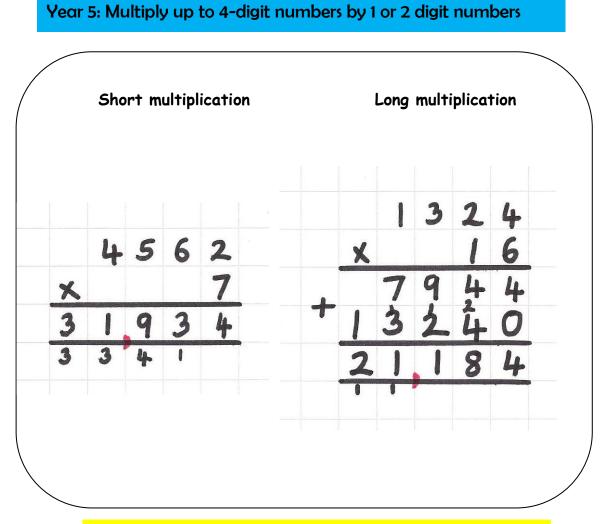

MULTIPLICATION

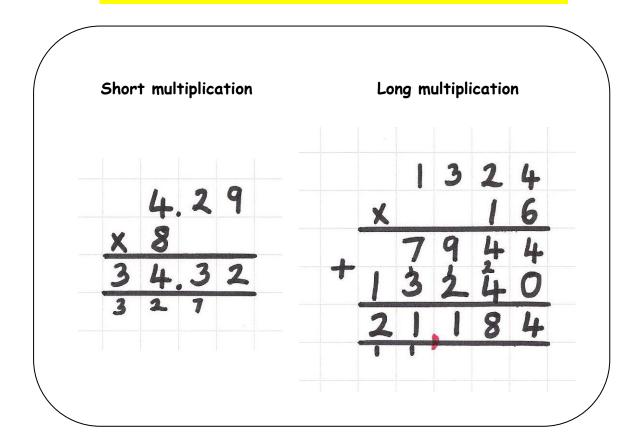

Year 4: Multiply 2 and 3-digit numbers by a 1-digit number

Year 6: Multiply up to 4-digit numbers by 1 or 2 digit numbers (see Year 5) and multiply decimals with 2 decimal places by a 1-digit number.

(where there is no remainder in the final answer) Grouping Division using arrays Place value counters How many 3s $15 \div 3 = 5$ in 15? 48÷ 4 = 12 5 hops in 15. How big is each hop? 10 15 ÷ 5 = 3 15 shared between 5 4 Year 4: Divide up to 3-digit numbers by a 1-digit number (without remainders initially) 84÷ 3 = 28 Division using arrays Place value counters 10 10 3 10 10 Short division 876÷ 6 = 146 413÷ 7 = 59 6 82736 3

Year 3: Divide 2-digit numbers by a 1-digit number

Year 5: Divide up to 4 digits by a 1-digit number, including those with remainders.
