

Southway Junior School Progression in Calculation

Progression from Year 3 to Year 6

The following Progression in Calculation policy has been written to meet the requirements of the National Curriculum 2014 for the teaching and learning of Mathematics.

The Progression in Calculation policy is designed to give consistent progression of learning in calculation from year 3 through to year 6.

This policy is organised according to age appropriate expectations as set out in the National Curriculum 2014.

The methods shown are only written ways of calculating. Children will also be calculating using mental strategies too.

During their time at Southway, children learn how to use models and images, such as empty number lines, to support their mental and informal written methods of calculation. As children's mental methods are strengthened and refined, so too are their informal written methods. These methods become more efficient and succinct and lead to efficient written methods that can be used more generally. By the end of Year 6 children are equipped with mental and written methods that they understand and can use correctly.

When faced with a calculation, children are able to decide which method is most appropriate and have strategies to check its accuracy. They will do this by asking themselves:

- Can I do this in my head?
- Can I do this in my head using drawing or jottings?
- Do I need to use a pencil and paper procedure?

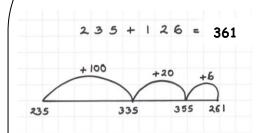

The overall aim is that when children leave Southway in Year 6 they:

- have a secure knowledge of number facts and a good understanding of the four operations.
- are able to use this knowledge and understanding to carry out calculations mentally and to apply general strategies when using one-digit and two-digit numbers and particular strategies to special cases involving bigger numbers.
- make use of diagrams and informal notes to help record steps and part answers when using mental methods that generate more information than can be kept in their heads;
- have an efficient and reliable written
 method of calculation for each operation
 that children can apply with confidence when
 undertaking calculations that they cannot
 carry out mentally.
- have rapid recall of all the times tables and related division facts.
 - the National Curriculum expectation is that by the end of Year 4, children are able to recall all 12 tables up to 12x12.

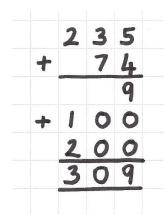

ADDITION

Year 3: Add numbers with up to 3 digits

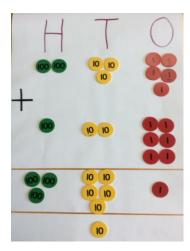

Number line

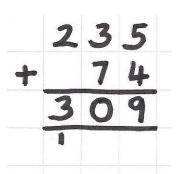

Expanded column addition

Place value counters

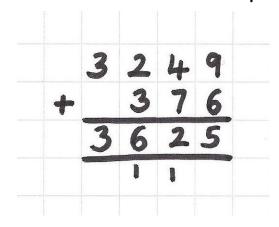

Compact column addition

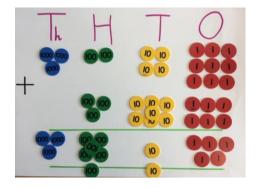

Year 4: Add numbers with up to 4 digits

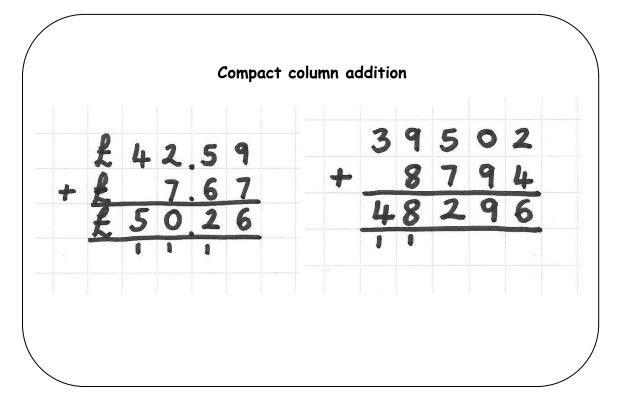

Compact column addition

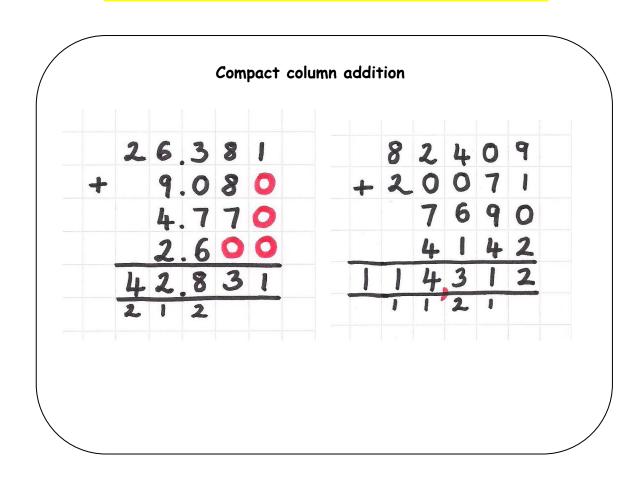

Place value counters

Year 5: Add numbers with more than 4 digits

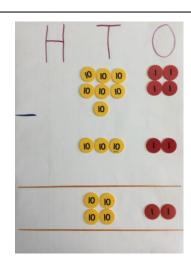

Year 6: Add several numbers of increasing complexity

SUBTRACTION

Place value counters

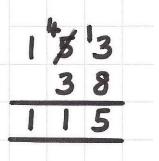

74- 32 = 42

Partitioned column subtraction

$$74-32=704$$
 -302
 $40+2=42$

Compact column subtraction

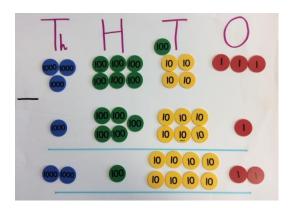

Year 4: Subtract with up to 4-digit numbers

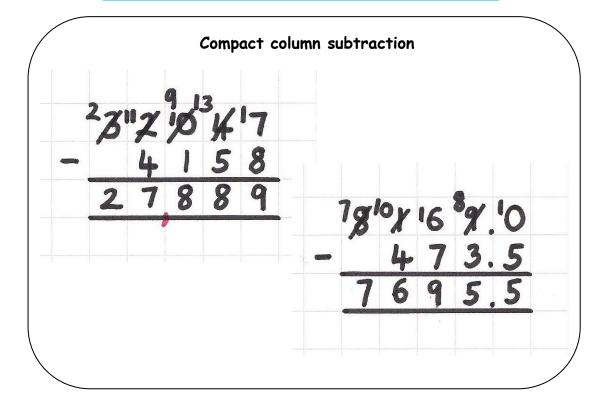

Compact column subtraction

3⁶7¹4³ - 1⁵6¹ 2 1 8 2

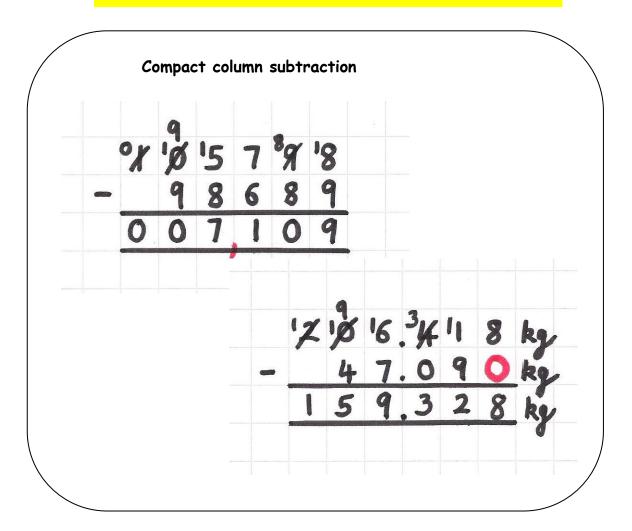

Place value counters

Year 5: Subtract with at least 4-digit numbers

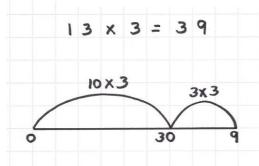

Year 6: Subtract with increasing large and more complex numbers and decimal values

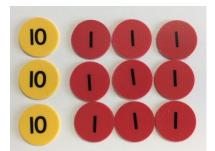

Year 3: Multiply 2-digit numbers by a 1-digit number

Number line

Place value counters

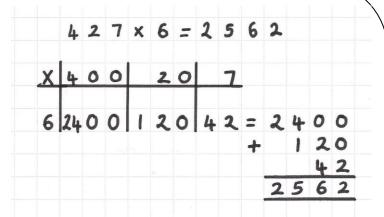

Grid multiplication

	2	6	×	3	=	7	8
×	2	0		6			
3	6	0	1	8	2	6	C
					+	1	8
						7	8

X	20	6
3	10 00	000000

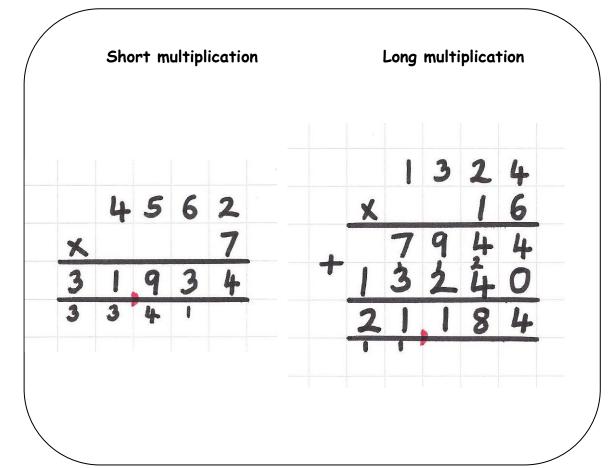

Year 4: Multiply 2 and 3-digit numbers by a 1-digit number

Grid multiplication

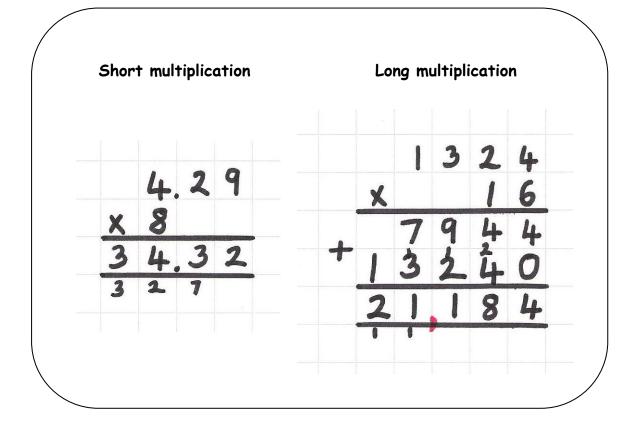

Short multiplication

Year 5: Multiply up to 4-digit numbers by 1 or 2 digit numbers

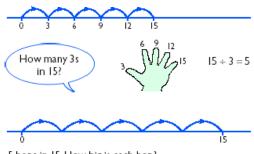

Year 6: Multiply up to 4-digit numbers by 1 or 2 digit numbers (see Year 5) and multiply decimals with 2 decimal places by a 1-digit number.

Year 3: Divide 2-digit numbers by a 1-digit number (where there is no remainder in the final answer)

Grouping

5 hops in 15. How big is each hop?

 $15 \div 5 = 3$

15 shared between 5

Division using arrays

Place value counters

48÷ 4 = 12

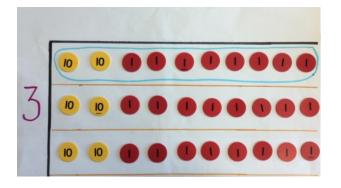

Year 4: Divide up to 3-digit numbers by a 1-digit number (without remainders initially)

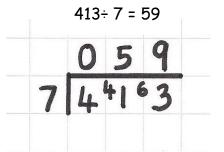

Division using arrays

84÷ 3 = 28

Place value counters

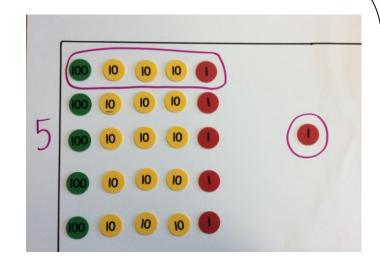

Short division

Division using arrays

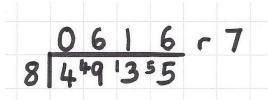

Place value counters

656÷ 5 = 131 r1

Short division

4935÷ 8 = 616 r7

Year 6: Divide at least 4 digits by both 1-digit and 2-digit numbers (including decimal numbers and quantities)

Long division

432÷ 15 = 28 r12

Short division
